

The screenshot shows the Visual Studio Code interface with a Python project. The file explorer on the left shows the project structure: `PythonProject` (C:\Users\Ameli\PycharmProjects\PythonProject) containing `.venv`, `Branching.py`, `main.py`, and `variables.py`. The `Branching.py` file is open in the editor, showing the following code:

```
1 kw_hours = int(input("Enter the KW hours used: "))
2
3 if kw_hours <= 1000:
4     amount = kw_hours * 7.633 / 100
5 else:
6     amount = (1000 * 7.633 / 100) + ((kw_hours - 1000) * 9.259 / 100)
7
8 print("Amount owed is $", amount)
```

The Run and Debug console shows the execution of the script:

```
C:\Users\Ameli\PycharmProjects\PythonProject\.venv\Scripts\python.exe C:\Users\Ameli\PycharmProjects\PythonProject\Branching.py
Enter the KW hours used: 764
Amount owed is $ 58.31612
Process finished with exit code 0
```

The status bar at the bottom indicates the file encoding is UTF-8, 4 spaces, and the Python version is 3.14.5.

This screenshot shows the same Visual Studio Code interface as the first, but with a different input value. The `Branching.py` file is still open and shows the same code:

```
1 kw_hours = int(input("Enter the KW hours used: "))
2
3 if kw_hours <= 1000:
4     amount = kw_hours * 7.633 / 100
5 else:
6     amount = (1000 * 7.633 / 100) + ((kw_hours - 1000) * 9.259 / 100)
7
8 print("Amount owed is $", amount)
```

The Run and Debug console shows the execution with the new input:

```
C:\Users\Ameli\PycharmProjects\PythonProject\.venv\Scripts\python.exe C:\Users\Ameli\PycharmProjects\PythonProject\Branching.py
Enter the KW hours used: 1215
Amount owed is $ 96.23685
Process finished with exit code 0
```

The status bar at the bottom remains the same, indicating UTF-8 encoding, 4 spaces, and Python 3.14.5.
